

Peeling plant

The line stripping consists of a series of machines interfaced between of them and

precisely:

Chain drive / parking trunks, a 5-way chains mesh marine

Separators logs: inclined structure with two side chains attached to sleepers containment trunk

Tipper / selector to lifters

Tape drive / introduction trunk in debarker

Debarker tunnel CREMONA SPA Model SP 80

Chain exhaust trunk bark (output debarker)

Pneumatic ejector side (exhaust trunk chain of the lung)

Chain drive / parking debarked logs (lung power sheeter), 5-way with modern roller chain and porters holding trunks;

Synchronizer - selector logs to overturning;

Chain inclined sheeter 4-way power;

Incline belt scraper bars to evacuation from bark peeling machine;

Centering electronic CREMONA SPA Model CE/08 with centering electronic

SHEETER CREMONA SPA

Maximum diameter trunks 1,000 mm width 2,700 mm knife;

Removal conveyor belt blanks with pneumatic ejector side;

Conveyor belts a power cutter;

Cutter CREMONA Model ROTAX

Tape pitcher DEPO supply;

Surge DEPO 4 unloading stations complete with hydraulic platforms of 5 where a split

To lower conveyor belts a recovery from scrap cutter

ROTAX

Maximum diameter trunks 1,000 mm width 2,700 mm knife;

CE Certification

the machinery is located in Italy
